Abstract

Among the political strategies to move the university system to the practical implementation of the statement of the second step of the Islamic Revolution, is the explanation of moral engineering and the realization of a practical movement towards it. Various factors can play a role in the continuation of this strategy and in the second step of the revolution. In Armani University, benefiting from sustainable ethical engineering is one of the few concepts that has received special attention and causes the establishment of social order and security and the development of individual and social justice. In this article,, we have tried to explain the potential and capacity of the virtuous thought of Mahdism and move towards the emergence based on the values of the Islamic Revolution. The most important findings of this research are showing the capacity of Mahdavi thought in the crystallization and development of order, cohesion and solidarity, security and consolidation of social relations in the ideal university and in the thought of academics at the level of the Islamic Revolution. One of the most important components in this moral engineering is "compassion and kindness.

Keywords: Armani University, moral engineering, the second step of the Islamic revolution, a university equal to the Islamic revolution, political strategy.
